

Docker

- **Web site** : <https://www.docker.com>

Docker is the original author and primary sponsor of the Docker open source project. Together with the community of maintainers and contributors, Docker aims to deliver open tools to help developers build applications with open APIs to help sysadmins better manage these applications.

A screenshot of the Docker Hub repository page for 'voximal/voxibot'. The page shows the repository name, a star icon, and the last push time. It includes sections for 'Short Description', 'Full Description', 'Docker Pull Command', and 'Owner'. The 'Short Description' states: 'Voxibot is a VoiceXML browser using voximal, asterisk and FreePBX as core softwares'. The 'Full Description' explains that 'Voximal allows you to create voice portals with VoiceXML language to interact with humans through phone calls. It is integrated with Asterisk, and FreePBX core softwares. Voximal is a full featured VoiceXML browser 2.1 compatible. This container, based on phusion ubuntu 14.04 images, enables a ready to use Web interface. You just need to connect with your browser and enjoy.' The 'Docker Pull Command' section shows the command: 'docker pull voximal/voxibot'. The 'Owner' section shows the user 'voximal'. At the bottom, there is a 'Comments (0)' section.

Getting started with Docker

Connect to your docker and execute :

```
# docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my_init -- bash -l
```

Check latest release from docker hub directory : <https://hub.docker.com/r/voximal/voxibot/>
