

# Run a Voxibot Docker container

- **Web site** : <https://www.docker.com>

Docker is the original author and primary sponsor of the Docker open source project. Together with the community of maintainers and contributors, Docker aims to deliver open tools to help developers build applications with open APIs to help sysadmins better manage these applications.

A screenshot of the Docker Hub repository page for 'voximal/voxibot'. The page includes a search bar, 'Sign up' and 'Log In' buttons, and repository details. The 'Short Description' states: 'Voxibot is a VoiceXML browser using voximal, asterisk and FreePBX as core softwares'. The 'Full Description' explains that Voximal allows creating voice portals with VoiceXML and is integrated with Asterisk and FreePBX. It also notes that the container is based on phusion/ubuntu 14.04 images. A code block shows the command: 'docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my\_init -- bash'. The 'Owner' section shows the 'voximal' profile. There are no comments.

## Getting started with Docker

Connect to your docker and execute :

```
# docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my_init -- bash -l
```

Check latest release from docker hub directory : <https://hub.docker.com/r/voximal/voxibot/>
