

Voxibot

set up voxibot with right package :

To be able to connect chatbot with voxibot we need specific database package which we would like to implement and integrate. therefore the first step is to download the necessary data files from the source of voxibot platform. Our sources exist on GitHub [Voxibot](#). These files are the backbone of our communication process between chatbot engine and voxibot.

Let's start

1. Go to the files and folders by this link [Voxibot packages](#). Click **clone or download** then **Download ZIP**. when the download finishes you go to a directory of file place and Extract the file.

Remark : This step if your host machine is windows and you download the package on Windows. It is better to use SSH connection to insert the package on your voxibot server. In our case, we use a tool called WinSCP

2. Connect your SSh tool (**WinSCP**) to your voxibot server, put the **host name**: IP of your server, **user name** : root or [your server name] **password** : [root password] or [user password]
