

Configuration of Voximal

All the configuration is managed through a web interface based on the FreePBX project. To access to the web interface, open the link http://your_server_address.

It's protected by a login.

Login

After installation there are 3 default login, with different access permissions

- user : access to Voximal configuration and reports.
- admin : user access and network configuration
- root : all access.

Each login has a default login, that can be updated with the root account.

Configuration steps

To configure the Voximal IVR you have 3 steps to do :

1. Configure the operator access ([SIP accounts](#))
2. Configure the relation between the DID and the VoiceXML service you want to use ([Number configuration](#))
3. Create VoiceXML service ([Voximal accounts](#))

SIP accounts

You can create a SIP trunk with an operator with the page Connectivity/SIP Accounts. You have to enter informations :

- A trunk name : a string to identify your accounts
- The peers details : enter all trunk informations (host, username, password, type)

```
host=myprovider.com  
username=0033123456789  
type=peer
```

- Register informations : enter registry informations like :

```
0033123456789:password@myprovider.com/33123456789
```

- add screenshot -

Number configuration

Firstly, you have to define which application you want to use by default for all incoming calls. It's done by defining the **any DID/any CID** or **All DIDs** settings in **Connectivity/Routes** page.

1. Select **All DIDs** item (on top right corner)
2. Leave empty Field **DID Number**
3. Select the application to use : **Voximal Application**
 - You can select an existing application
 - Or create a new one by clicking Add new **Voximal application**
