

Installation of Voximal

Automated installation using the bundle

In order to install Voximal, you need a Centos 6 64bit server.

Download the latest version of Voximal as a .tar.gz package from:

- [voxibot 1.x.x \(Date\)](#)

You need the tar and gzip tools already installed on your server.

Then:

1. Change the perission to execute the installer script (chmod +x script).
2. Execute the script and follow the instructions (generaly answer 'y' for each questions).
3. When done, connect to <https://myserver/admin> - you will be asked for login.
4. Login using as user user password user.

Screen shot:

```
[root@server voxibot.V1.x.x]# ./install.sh

Version V1.x.x

Version V1.x.x installed
Updating V1.x.x -> V1.x.x

Installation Telephony          [ OK ]
Installation Framework          [ OK ]
Installation Interpreter        [ OK ]
Installation Ressources         [ OK ]

Installation complete

To access the Web interface browse to :
    http://<your_machine_ip>/admin (login 'user' and password 'user')

[root@server voxibot.V1.x.x]#
```
