

Installation of Voximal

Automated installation using the installer

In order to install Voximal, you need a Linux 32 or 64 bit server.

Download the latest version of Voximal (called Voxibot) as a .tar.gz package from:

- [voxibot 1.x.x](#)
- [voxibot 1.x.x](#)
- [voxibot 1.x.x](#)

Note : You need the tar and gzip tools already installed on your server.

Then:

1. You need to be root to process the installation.
2. Change the permission to execute the installer script (chmod +x script).
3. Execute the script and follow the instructions (generally answer 'y' for each questions).
4. When done, connect to <https://myserver/admin> - you will be asked for login.
5. Login using as user user password user.

Screen shot:

```
[root]# ./voxibot_1.0.xx_2016xxxx_0voximalxxcentos6_all.run

Version V1.x.x

Version V1.x.x installed
Updating V1.x.x -> V1.x.x

Installation Telephony          [ OK ]
Installation Framework          [ OK ]
Installation Interpreter        [ OK ]
Installation Ressources         [ OK ]

Installation complete

To access the Web interface browse to :
  http://<your_machine_ip>/admin (login 'user' and password 'user')

[root]#
```
