The screenshot shows the AWS console homepage in French. At the top, there's a navigation bar with the AWS logo, a menu icon, and links for "Mise en route", "Produits", "Solutions", and "Plus". On the right, there are links for "Français", "Mon compte", and a "Créer votre compte" button. The main content area has a green background with a large heading "Créez votre premier projet avec AWS en utilisant nos guides étape par étape." and a "Voir les projets" link. To the right, there's a box titled "Gérez vos ressources" with a "Se connecter à la console" button and information about the "Application mobile AWS Console". Below this, there are four service tiles: "AMAZON API GATEWAY", "AMAZON ECS", "AWS KEY MANAGEMENT SERVICE", and "AMAZON SNOWBALL", each with a brief description and a "En savoir plus" link.

The image shows two screenshots of the AWS Management Console. The top screenshot displays the 'Amazon Web Services' page, which categorizes various AWS services into groups like Compute, Storage & Content Delivery, Database, Developer Tools, Management Tools, Security & Identity, Internet of Things, Game Development, Mobile Services, and Application Services. The right sidebar includes 'Resource Groups', 'Additional Resources' (Getting Started, AWS Console Mobile App, AWS Marketplace, AWS re:Invent Announcements), and 'Service Health' (All services operating normally). The bottom screenshot shows the 'EC2 Dashboard' with a left-hand navigation menu. The main content area lists resources in the EU Central (Frankfurt) region: 0 Running Instances, 0 Dedicated Hosts, 0 Volumes, 1 Key Pairs, and 0 Placement Groups. It also features a 'Create Instance' button, a 'Service Health' section showing EU Central (Frankfurt) is operating normally, and a 'Scheduled Events' section with no events.

Launch a new instance

- Click the **[Launch Instance]** button.
- Select **[Community AMIs]**
- Enter in the search field : **voxibot**
- Select the latest Voxibot AMI by pushing the **[Select]** button.

Step 1: Choose an Amazon Machine Image (AMI)

An AMI is a template that contains the software configuration (operating system, application server, and applications) required to launch your instance. You can select an AMI provided by AWS, our user community, or the AWS Marketplace; or you can select one of your own AMIs.

Step 2: Choose an Instance Type

Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instances are virtual servers that can run applications. They have varying combinations of CPU, memory, storage, and networking capacity, and give you the flexibility to choose the appropriate mix of resources for your applications. You can skip the fine tune option to directly launch the instance, so you will configure your Security group here are later from the Dashboard :

- Open TCP / SSH port : 22
- Open TCP / HTTP port : 80
- Open UDP / IAX port : 4569

The IAX port is used to allows placing calls from :

- a IAX Soft Phone ([Soft Phone connection](#))
- the test numbers ([Call the test service](#))

If you choice to connect a Voip account to a Telecom provider, you will need to open :

- Open UDP / SIP port : 5060 (take care about the SIP attacks)
- Open UDP / RTP ports : 10000 to 20000

Step 7: Review Instance Launch

Please review your instance launch details. You can go back to edit changes for each section. Click **Launch** to assign a key pair to your instance and complete the launch process.

Improve your instances' security. Your security group, launch-wizard-1, is open to the world.
Your instances may be accessible from any IP address. We recommend that you update your security group rules to allow access from known IP addresses only. You can also open additional ports in your security group to facilitate access to the application or service you're running, e.g., HTTP (80) for web servers. [Edit security groups](#)
