- **Web site** : <https://aws.amazon.com/>

Amazon Web Services (AWS) is a secure cloud services platform, offering compute power, database storage, content delivery and other functionality to help businesses scale and grow. Explore how millions of customers are currently leveraging AWS cloud products and solutions to build sophisticated applications with increased flexibility, scalability and reliability.

## Connect to your AC2 Dashboard

A screenshot of the AWS console homepage. The header includes the AWS logo, navigation links like "Menu", "Mise en route", "Produits", "Solutions", "Plus", and a language selector set to "Français". There are also links for "Mon compte" and "Créer votre compte". The main content area has a green background with a large graphic and text: "Créez votre premier projet avec AWS en utilisant nos guides étape par étape. Voir les projets &gt;". To the right, there's a box titled "Gérez vos ressources" with a button "Se connecter à la console", a section for the "Application mobile AWS Console", and a link to "Télécharger l'application mobile &gt;". Below this, there are four service tiles: "AMAZON API GATEWAY" (with a diagram of API calls), "AMAZON ECS" (with a diagram of container stacks), "AWS KEY MANAGEMENT SERVICE" (with a diagram of a key and a lock), and "AMAZON SNOWBALL" (with a diagram of a cloud and a storage unit). Each tile has a brief description and a link to "En savoir plus".

The image shows two screenshots of the AWS Management Console. The top screenshot displays the 'Amazon Web Services' page, which lists various services categorized into Compute, Storage & Content Delivery, Database, Developer Tools, Management Tools, Security & Identity, Internet of Things, Game Development, Mobile Services, and Application Services. The bottom screenshot shows the 'EC2 Dashboard' with a sidebar on the left containing navigation links like 'Events', 'Tags', 'Reports', 'Limits', 'INSTANCES', 'IMAGES', 'ELASTIC BLOCK STORE', 'NETWORK & SECURITY', 'LOAD BALANCING', 'AUTO SCALING', and 'COMMANDS'. The main content area shows 'Resources' for EC2 instances in the EU Central (Frankfurt) region, including a list of running instances, dedicated hosts, volumes, key pairs, and placement groups. A 'Create Instance' button is visible, along with a 'Service Health' section showing the status of the EU Central (Frankfurt) region and its availability zones.

## Launch a new instance

- Click the **[Launch Instance]** button.
- Select **[Community AMIs]**
- Enter in the search fiell : **voxibot**
- Select the lastes Voxibot AMI by pushing the **[Select]** button.

**Step 1: Choose an Amazon Machine Image (AMI)**

An AMI is a template that contains the software configuration (operating system, application server, and applications) required to launch your instance. You can select an AMI provided by AWS, our user community, or the AWS Marketplace; or you can select one of your own AMIs.

**Step 2: Choose an Instance Type**

Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instances are virtual servers that can run applications. They have varying combinations of CPU, memory, storage, and networking capacity, and give you the flexibility to choose the appropriate mix of resources for your applications. You can skip the fine tune option to directly launch the instance, so you will configure your Security group here are later from the Dashboard :

- Open TCP / SSH port : 22
- Open TCP / HTTP port : 80
- Open UDP / IAX port : 4569

The IAX port is used to allows placing calls from :

- a IAX Soft Phone ([Soft Phone connection](#))
- the test numbers ([Call the test service](#))

If you choice to connect a Voip account to a Telecom provider, you will need to open :

- Open UDP / SIP port : 5060 (take care about the SIP attacks)
- Open UDP / RTP ports : 10000 to 20000

**Step 7: Review Instance Launch**  
Please review your instance launch details. You can go back to edit changes for each section. Click **Launch** to assign a key pair to your instance and complete the launch process.

**Improve your instances' security. Your security group, launch-wizard-1, is open to the world.**  
Your instances may be accessible from any IP address. We recommend that you update your security group rules to allow access from known IP addresses only. You can also open additional ports in your security group to facilitate access to the application or service you're running, e.g., HTTP (80) for web servers. [Edit security groups](#)

## Launch Status

**Your instances are now launching**

The following instance launches have been initiated: [i-30809ba7](#) [View launch log](#)

**Get notified of estimated charges**

Create billing alerts to get an email notification when estimated charges on your AWS bill exceed an amount you define (for example, if you exceed the free usage tier).

### How to connect to your instances

Your instances are launching, and it may take a few minutes until they are in the **running** state, when they will be ready for you to use. Usage hours on your new instances will start immediately and continue to accrue until you stop or terminate your instances.

Click **View instances** to monitor your instances' status. Once your instances are in the **running** state, you can **connect** to them from the Instances screen. [Find out](#) how to connect to your instances.
