

Run a Voxibot Docker container

- **Web site** : <https://www.docker.com>

Docker is the original author and primary sponsor of the Docker open source project. Together with the community of maintainers and contributors, Docker aims to deliver open tools to help developers build applications with open APIs to help sysadmins better manage these applications.

The screenshot shows the Docker Hub interface for the 'voximal/voxibot' repository. At the top, there's a dark navigation bar with 'Explore', 'Help', a search bar, and 'Sign up'/'Log in' buttons. Below this, the repository name 'voximal/voxibot' is displayed with a star icon and 'Last pushed: 5 hours ago'. The main content area has tabs for 'Repo info' and 'Tags'. Under 'Repo info', there's a 'Short Description' box stating 'Voxibot is a VoiceXML browser using voximal, asterisk and FreePBX as core softwares'. Below that is a 'Full Description' box with more details about the project and a code block containing the command: `docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my_init -- bash`. To the right, there's a 'Docker Pull Command' box with the command `docker pull voximal/voxibot` and an 'Owner' section showing the 'voximal' user profile.

Getting started with Docker

Connect to your docker and execute :

```
# docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my_init -- bash -l
```

Check latest release from docker hub directory : <https://hub.docker.com/r/voximal/voxibot/>
