

Run a Voxibot Docker container

- **Web site** : <https://www.docker.com>

Docker is the original author and primary sponsor of the Docker open source project. Together with the community of maintainers and contributors, Docker aims to deliver open tools to help developers build applications with open APIs to help sysadmins better manage these applications.

The screenshot shows the Docker Hub interface for the `voximal/voxibot` repository. At the top, there's a navigation bar with 'Explore', 'Help', a search bar, and 'Sign up'/'Log in' buttons. Below the navigation bar, the repository name 'voximal/voxibot' is displayed with a star icon and the text 'Last pushed: 5 hours ago'. The main content area is divided into two columns. The left column contains a 'Short Description' box stating 'Voxibot is a VoiceXML browser using voximal, asterisk and FreePBX as core softwares', a 'Full Description' box with more details about the project and its integration with Asterisk and FreePBX, and a 'Comments (0)' section. The right column contains a 'Docker Pull Command' box with the command `docker pull voximal/voxibot` and an 'Owner' box showing the 'voximal' profile. A code block in the 'Full Description' section shows the command to run the container: `docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my_init -- bash`.

Getting started with Docker

Connect to your docker and execute :

```
# docker run -i -t -p 80:80 -p 4569:4596/udp voximal/voxibot:latest my_init -- bash -l
```

Check latest release from docker hub directory : <https://hub.docker.com/r/voximal/voxibot/>
