

MP3 Player (mpg123)

Synopsis

MP3player for Asterisk

Description

Executes the mpg123 unix program to play the given location which typically would either be the filename of an MP3 sound file, or the URL of an MP3 stream. The callers can exit by dialing any digit. It use the mpg123 version 0.59r (<http://www.mpg123.de/mpg123/mpg123-0.59r.tar.gz>). The mpg123 program seems to work best at playing mp3s which do not have any ID3 tag details embedded in them. (Suppressing stderr output fixes the ID3 problem).

Release Notes

app_mp3.c needs this patch to work with Vxi:

Add this:

```
...
#include <sys/time.h>
#ifdef i6net
#include <sys/wait.h>
#endif
#ifdef HAVE_CAP
...

```

Complete with:
