Voximal documentation - https://wiki.voximal.com/

Uninstall or Upgrade

Uninstall Vxi

In the same directory as the install.sh script, the uninstall.sh script will remove all installed components and files.

```
# cd vxml_Vx.x_date_build
# ./uninstall.sh
```

Update or Upgrade Vxi

If you install a new version over a previously installed version, the installation script retained your configuration file, vxml.conf. Check the new configuration file, vxml.conf.sample, in order to integrate some new parameters into vxml.conf.

Check the VoiceXML interpreter configuration file, client.cfg too.

cd /etc/asterisk
diff ./vxml.conf ./vxml.conf.sample
cd /etc/openvxi
diff ./client.cfg ./client.cfg.sample
